

Minimizing Risks from Fluoroscopic X Rays[®]

A Continuing Education and Credentialing Program for Safe Practice

Fifth Edition

by

Louis K. Wagner, Ph.D., DABR, FACR, FAAPM

Keith J. Strauss, M.S., DABR, FACR, FAAPM

Benjamin R. Archer, Ph.D., DABR, FACMP, FAAPM

ABOUT THIS MONOGRAPH

GETTING STARTED

A SHORT HISTORY LESSON

THE RECENT PAST

EDUCATION

RESPONSIBILITIES

QUALIFIED USERS

COMPONENTS OF TRAINING

TRAINING ON SPECIFIC EQUIPMENT

PROPERTIES OF X RAYS

X RAY VERSUS X-RAY

X RAYS AND LIGHT

X-RAY IMAGING ALWAYS CAUSES BIOLOGICAL CHANGES

RADIATION QUANTITIES AND UNITS

RADIATION EFFECTS VERSUS RADIATION RISK

ABSORBED DOSE

AIR KERMA AND EXPOSURE

Free-in-air air kerma

Surface air kerma

Exposure as a quantity

ABSORBED DOSE AT ENTRANCE SKIN SURFACE

EQUIVALENT DOSE

EFFECTIVE DOSE

KERMA-AREA (DOSE-AREA) PRODUCT

SUMMARY OF "DOSE"

BIOLOGICAL EFFECTS

CLASSIFICATIONS OF RADIATION EFFECTS

Stochastic effects

Cancers in patients

Cancers in medical workers

Radiation-Induced heritable effects

Radiation-induced injuries

INJURIES TO PRACTITIONERS

INJURIES IN PATIENTS

RECOGNIZING FLUOROSCOPICALLY INDUCED RADIATION SKIN INJURY

RADIATION-INDUCED CATARACT

FLUOROSCOPY AND FLUOROGRAPHY

X-RAY TUBE KILOVOLTAGE

TUBE CURRENT

PULSED VERSUS CONTINUOUS FLUOROSCOPY

Conventional fluoroscopy

Pulsed fluoroscopy

Variable pulsed fluoroscopy

FLUOROGRAPHY

FILTRATION

INTERNAL SHIELDING

GEOMETRIC COLLIMATION

GENRES OF FLUOROSCOPES

Mini-C-arms

Standard mobile C-arms

Table-tower fluoroscopes

Fixed-in-room C-arms

OPERATOR CONTROL

RADIATION MANAGEMENT FOR FLUOROSCOPY

#1 ANATOMICAL SIZE OF THE PATIENT

Factors affecting dose rate

Patient size and dose rates to personnel

#2. DOSE-RATE SETTINGS

Operational software options

Dose rate settings for fluoroscopy

Fluoroscopic pulse rate

Fluoroscopic dose rate

Recorded fluoroscopy

Fluorography or acquisition imaging

Cineangiocardiology and the cine loop

Digital fluorography

Special image-guiding techniques

Image display

#3. BEAM-ON TIME AND DWELL TIME

Beam-on time

Fluoroscopy timer

Beam dwell time

Fluorography on-time

Digital fluorography

Cine and the cine loop

Aids to reduce beam-on time

Beam-on time and doses to personnel

#4. PROXIMITY OF PATIENT TO X-RAY TUBE

Source-to-patient distance

A conundrum

The separator cone (or spacer device)

SSD and dose to personnel

SSD and image quality

#5. PROXIMITY OF IMAGE RECEPTOR TO PATIENT

Patient-to-image-receptor distance

#4 AND #5 TENETS COMBINED

Patient dose and physician height

Patient dose and invasive devices

#6 MAGNIFICATION

Field of view (FOV)

Image magnification

Electronic magnification

Geometric magnification

#7. THE GRID

#8 COLLIMATION

X-ray field collimation

#9. MONITORING AND MANAGING RADIATION USE

#9A. Monitoring radiation use

Fluoroscopy on-time

Cumulative air kerma at a reference point

Air kerma-area product

Skin-dose mapping

#9B. Managing radiation use

High-dose procedures

Before the procedure

Demographic factors

Medications

Radiation history

Diseases or conditions

Counseling the patient

The special condition of pregnancy

During the procedure

After the procedure

#10. MASTERY OF RADIATION SAFETY

Viewpoint

Protective aprons

Radiation monitoring for personnel

Using distance as a shield

Leaded eyewear, thyroid shields, and upper body shields

Mobile and lower body barriers

Hand protection

Equipment design safety features

Conventional table-tower fluoroscopy

Remote control fluoroscopy

C-arm fluoroscopy

Invasive devices & doses to patient and staff

Fluoroscopy with x-ray tube above table

Fluoroscopy with x-ray tube under table

Pregnant personnel

Regulations

CONCLUSION
